

**WHY WOULD YOU USE THIS FEATURE?**

The Performance Dashboard allows the instructor to find specific information about each user in his/her Blackboard course. The instructor can see when the last time student's logged into the course. Instructors can view statistics on discussion forums, the Early Warning System, grades and adaptive release rules that were created for a specific student.

**HOW DO I USE THE PERFORMANCE DASHBOARD?**

- Access your course and click on Control Panel
- Click on Performance Dashboard in the Assessment section on the right side of the Control Panel.
- You will see your student's names and UTC ID's. From this area you can view their role for the course and the last time they access this specific course.
  - **Review Status** - If you have set up any review status assignments, you can see the status of that by clicking on the number.
  - **Adaptive Release** - you can see who has visibility to specific course items
  - **Discussion boards** - can be viewed for each student by clicking on the number
  - **Early Warning System** - data shows the number of rules that meets the criteria out of the number of rules created
  - **View grades** – allows you to view the grades for that student in the gradebook
  - In order to view any information for the above areas, instructors must have enabled these areas.
